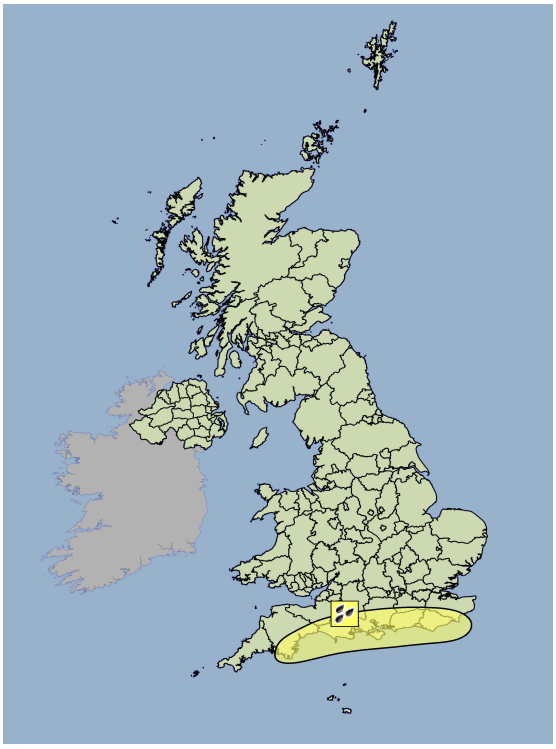
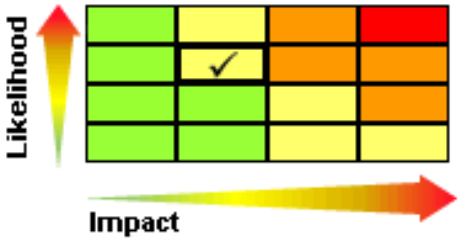
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone will move southeastwards across southern England through Wednesday before clearing away later in the day. This will bring some persistent rain at times, and as it clears, some locally heavy rainfall is possible. Accumulations of 10 to 15 mm are expected fairly widely with locally up to 25 mm in some spots, although some places will miss the worst of the rain.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:00 on Wed, 27th Jan 2016** until **18:00 on Wed, 27th Jan 2016**

An area of rain will move southeastwards across southern England during Wednesday. Some locally heavy rainfall is possible and with this falling on saturated ground some localised flooding may occur. Southwesterly gales are likely along south coasts for a time.

Please be aware of the potential for local disruption to travel from flooding and some difficult driving conditions.

This is an update to the warning issued on Monday to include the south of Devon and reduce the northward extent of the warning area. Total rainfall accumulations have also been amended down slightly.
